Senior Software Engineer specializing in backend platforms, conversational AI, and large language model applications. Experienced in building scalable systems, improving engineering processes, and leading cross-functional teams from concept to production

Experience

Senior AI Software Engineer

Hybrid work - Paraná

Fortics

2025 – 2026

- Developed and enhanced conversational AI and chatbot platform capabilities used by **over 25000 users**;
- Implemented observability and traceability solutions that enabled proactive issue detection and **significantly reduced** support incidents;
- Strengthened platform security by identifying and mitigating potential vulnerabilities shortly after joining the company;
- Improved user experience through validation, guidance, and self-service features, reducing customer support demand;
- Improved platform reliability for **1,000+** concurrent users in the same chatbot. **Over 50x** performance improvement in critical workflows.

Backend Software Engineer

Remote Work - São Paulo

Zenvia

2024 – 2025

- Developed and maintained high-availability, highly scalable backend services within a large-scale engineering organization;
- Built, tested, and operated production services following Agile development practices;
- Improved code quality and maintainability through refactoring initiatives and software engineering best practices.

Chief of Diffusion and Popularization of New Technologies

Pato Branco - PR

Municipal Government of Pato Branco

2022 – 2024

- Led the design, architecture, and implementation of software solutions across web, mobile, backend, and embedded systems;
- Introduced Agile methodologies into the public sector, improving project organization and delivery predictability;
- Designed and developed a fleet management platform integrating mobile, backend, GPS tracking, and real-time communication technologies;
- Delivered software solutions supporting municipal research, robotics initiatives, public events, and technology programs;
- Built and maintained public-facing technology platforms used by citizens, event participants, and municipal departments.

Leadership Experience

Tech Lead

Hybrid work - Paraná

Fortics

2025 – 2026

- Applied Lean and Agile practices to identify development bottlenecks and improve team productivity by **50%**;
- Trained developers across the team, enabling broader ownership of platform components and accelerating feature delivery;
- Established an end-to-end testing framework with high system coverage, contributing to highly stable releases and minimal rollback requirements

CTO

Remote Work

Darch Development

2022 – Present

- Delivered projects for clients across **human resources, e-commerce and agro** sectors, including web, mobile, backend, and embedded systems solutions;
- Defined technical strategy, software architecture, and engineering processes across client projects.
- Managed client relationships, requirements gathering, and solution design from conception through delivery.

Achievements and Awards

- Currently hold the record for the most efficient vehicle in the university's Shell Eco-Marathon team, achieving 769,9 km/liter in the prototype ICE category. Won 2nd place in the Data and telemetry category in the same competition using MQTT-based architecture and Celular network.

Education

Computer Science

Distance Learning

Anhanguera University

2025 – Present

Computer Engineering

Pato Branco - PR

UTFPR - Federal University of Technology - Paraná

2020 – 2025

Technical Degree in Mechatronics

São Paulo

ETEC Rubens de Faria e Souza

2015 – 2017

Skills and Interests

Skills: Python, Java, TypeScript, Node.js, PostgreSQL, Docker, LLMs, AI Agents, System Design, MQTT

Interests: AI, Robotics, Biomedical Engineering, Embedded Systems, Electronics, Gaming, Martial Arts, Personal Finance
